

**Greetings!** 

## THE GREEN NEW DEAL IS A BIG DEAL

It's a big deal because it calls us to envision and commit to restoring and creating an America of equality, security, true democracy and the health of people and Earth.

It addresses just about every aspect of our human lives: energy, climate change, agriculture, jobs, environment, transportation, infrastructure, industry, health care, family, and equal opportunities for all.

Opponents shout "Socialism!" "Dark Ages!" "It will destroy the economy!" Let us please not fall into the trap of labels and slogans that keep us from looking clearly at the ideas and values encompassed in the proposal of the Green New Deal. Scientifically and ethically we cannot continue business as usual. It is our economic and political systems which are destroying and degrading personal lives and Earth.

When asked how we pay for this, let's also ask how can we not? How can we put a dollar value on clean air and water, healthy soil, and a sustainable future? We could also ask how we will

### A Closer Look at the Green New Deal

This is a <u>Summary Page</u> with the Guiding Vision, Goals, Projects and Financing. Here is the full text of the <u>Resolution</u> before Congress.

How do we pay for the Green New Deal?
"Financing the Green Transition," from the Next
System Project. "It's a shame we would have to
weight the costs and benefits of saving clean

water, air, soil." Another related article: "We Can Pay for a Green New Deal." "We will pay for the Green New Deal like we pay for everything else: with public money appropriated by Congress."

"Climate Change is Scary, Not the Green New Deal

In <u>"The Green New Deal's Opponents are Stuck in the Past"</u>
David Korten discusses how the Green New Deal and climate change are too serious for political labels. See also <u>"Capitalism and Socialism is a False Choice."</u>

\*\*\*

Given the threat the climate crisis poses to the future of humanity, it is arguably more important than was Franklin Roosevelt's bold New Deal response to the Great Depression.

We must now seek a path that restores the health of Earth's regenerative systems while securing equity, material sufficiency, peace, and spiritual abundance for all, exactly the opposite of the plutocrats' drive to secure power, privilege, and material excess for themselves. This makes democracy far more than just a good idea; it is now an imperative. Quotes by David Korten

Restoring Democracy
The Anti-Corruption Act and the National Popular Vote

Jennifer Lawrence and John Silver of Represent.Us. illuminate the nature of our broken political system and how we can address the problems with the Anti-Corruption Act. It reduces the influence of big money, curtails gerrymandering and makes voting easier. The winning strategy is

to go around Congress right now to adopt these measures city by city, and state by state, which ultimately will lead to adoption at the federal level. 85 such measures have passed around the country and 87% of folks across the political When the people lead, the leaders follow. Gandhi

Why I have hope in the Face of Human Extinction
David Korten

When I ask an audience,
"Who believes we are on a
path to human
extinction?" nearly every
hand goes up. It's a sign of
a growing awareness that
humanity is on a path to
self-imposed
environmental and social
collapse. For me, that
awareness is a source of
hope.

spectrum support this work. Watch this 12 min. video to find out how it works.

The National Popular Vote is a bill to ensure that each person's

vote counts equally. It enable each state to determine how its electoral votes will be cast without amending the Constitution. If states representing at least 270 electoral votes (a majority of 538) adopt the National Popular Vote plan and award their votes to the winner of the popular vote

across America, then the Electoral College will reflect the choice of the people in all 50 states and DC.

Read more here and see the map of electoral votes in the US under "Status of States".

#### PLASTIC ACTION AROUND THE WORLD

The South Pacific island of Vanuatu has one of the world's strictest plastic bans. "The problem with plastics is not simply a litter problem, it is a pollution problem created by corporations and mismanaged by governments, and it should be treated as an inherently dangerous substance," says Mirjam Kopp, project leader on plastic pollution. Read more.

Several things need to come together to address the enormous problem of plastic pollution: We need to consume less and think in terms of zero waste. All our decisions must be considered in light of our actions' impact on the planet. We need to use our purchasing power to demand companies give us products that are eco-conscious. We need to develop alternative materials to use for packaging. Here are some articles that speak to these issues:

Plastic Packaging Alternative Using Algae

<u>Plastic-Free Business Respond to Consumer</u> <u>Anxiety About Pollution and Climate</u> <u>Change</u>

Questions about plastic waste and recycling

IBM working on new process to separate and digest all kinds of plastic.
